Glenair Space Systems Group in Salem, Germany, specializes in the construction of electronic test equipment and turnkey electronic ground support racks for satellites, simulation programming, and test. GSS assembly staff are ESA-certified and can engineer and produce ground support equipment ranging from test harnesses and power/data distribution cables to fully integrated test racks complete with interface/simulation programming. Signature ground support test racks and cable assemblies have been built for satellite programs including ExoMars, EML, EarthCare, BepiColumbo, Sentinel I, Sentinel II, Sentinel VI Jason, and others.
